Lucia Cosulich officially delivered

Lucia Cosulich officially delivered

30 June 2026

Fratelli Cosulich Marine Energy celebrated the delivery of Lucia Cosulich, officially delivered today at Taizhou Maple Leaf Shipyard in China.

The vessel is the second of four sister methanol-ready IMO II bunker tankers developed within the Group's fleet expansion programme and follows the launching ceremony held on 2 May 2026.

Designed to support the Group's bunkering operations and future fuel requirements, Lucia Cosulich is part of the new generation of vessels developed by Fratelli Cosulich Marine Energy to combine operational reliability, safety and fuel flexibility.

The delivery reflects the continued collaboration between the project team, shipyard partners and all parties involved throughout the construction and completion process.

Lucia Cosulich will now enter the final preparation phase ahead of her next operational steps, further strengthening the Group's ability to provide reliable bunkering solutions.

We wish Lucia Cosulich and her crew fair winds on the next stage of her journey.
