Carlotta Cosulich Launching Ceremony

Carlotta Cosulich Launching Ceremony

August 14, 2026

Another milestone for Fratelli Cosulich Marine Energy's new generation of **methanol-ready IMO II bunker tankers**.

The launch of Carlotta Cosulich, the third of four sister vessels, took place at Taizhou Maple Leaf Shipyard in China, bringing together the project team, partners and stakeholders who made this achievement possible.

Silvia Bordoni, General Manager, proudly served as the vessel's godmother during the ceremony.

Designed with MarineLINE-coated cargo tanks and methanol readiness from the outset, Carlotta Cosulich combines operational flexibility with future-fuel readiness. Equipped with a 5-ton cargo crane and dedicated arrangements for Single Point Mooring (SPM) operations further enhances her versatility across a wider range of bunkering operations.

Following the successful delivery of her two sister vessels, she brings us one step closer to completing this four-vessel programme and reinforces Fratelli Cosulich Marine Energy's commitment to safety, innovation, sustainability and operational excellence.
