Carlotta Cosulich officially delivered

Carlotta Cosulich officially delivered

28 October, 2026

Fratelli Cosulich Marine Energy announces the official delivery of Carlotta Cosulich at Taizhou Maple Leaf Shipyard in China.

The 8,585 DWT vessel is the third of four sister methanol-ready IMO II bunker tankers developed under the company's fleet expansion programme, following the successful deliveries of Anna Cosulich and Lucia Cosulich.

Designed to meet a wide range of bunkering requirements and support the evolving marine fuels market, Carlotta Cosulich combines operational reliability, safety and fuel flexibility. Her technical features include MarineLINE® cargo tank coating, Single Point Mooring (SPM) capability and a 5-tonne crane, enhancing her versatility across different bunkering operations.

The delivery represents another step towards completing Fratelli Cosulich Marine Energy's four-vessel programme and reflects the collective efforts of the project team, shipyard partners and all those involved throughout the construction process.

Carlotta Cosulich will now undergo final preparations ahead of entering service, further contributing to the development of the Group's bunkering capabilities.

We wish Carlotta Cosulich and her crew fair winds and following seas on her maiden voyage.
