PRESS RELEASE

Natalia Cosulich Keel Laying Ceremony

Natalia Cosulich Keel Laying Ceremony

November 18, 2026

We are pleased to celebrate another important milestone in our new building programme with **the keel laying ceremony of Natalia Cosulich**, held at Taizhou Maple Leaf Shipyard, China.

As the **fourth sister vessel in our series of 7,999 DWT IMO Type II chemical bunker tankers**, Natalia Cosulich marks further progress towards the completion of this new generation of methanol-ready vessels.

The keel laying ceremony marks a key stage in the shipbuilding process, **symbolising the beginning of the vessel's physical construction**. It also highlights the dedication, technical expertise and coordinated efforts of our teams and the shipyard.

Designed to support the evolving needs of the marine energy industry, Natalia Cosulich will feature methanol-ready capabilities, dedicated bunkering arrangements and advanced safety systems to facilitate future alternative-fuel operations.

This milestone goes beyond the construction of another vessel. It **underscores our continued investment in fleet development** and our commitment to supporting the maritime industry's transition towards cleaner and more sustainable marine fuels.

With her keel now laid, we look forward to seeing Natalia Cosulich take shape as we continue to advance our new building programme.
